

SW G211

striking mechanism lubricant (100 ml) inc.
pistol and 2 nozzle tips

The impact grease set SW G211 consists of a 100ml grease tube, a suitable gun and two nozzle attachments. Ideally, the grease is used for the impact mechanisms of impact wrenches but also for the greasing of angle head gears. The nozzle attachments enable simple and quick injection via grease nipples on the tool. The grease tube can also be ordered separately (SW G200 / 800969).
